(54) WIRING STRUCTURE OF LIQUID CRYSTAL DISPLAY PANEL

(57)Abstract:

PURPOSE: To provide the liquid crystal display panel which can be increased in size and has superior reliability.

CONSTITUTION: The liquid crystal display panel is equipped with a glass substrate 100 where chip electrodes arranged corresponding to the pads of IC chips 200 and connection terminals which are connected to the chip electrodes and arranged at positions hidden behind the mounted IC chips 200 are arranged except at a display part and a flexible substrate 400 where connection parts corresponding to the connection terminals are formed; and the flexible substrate 400 connects the IC chips 200 mutually and the connection terminals are arranged as linearly to the mounted IC chips 200 as possible. The flexible substrate 400 is arranged over those connection terminals and IC chips 200.

LEGAL STATUS

[Date of request for examination] 25.09.1998

[Date of sending the examiner's decision of rejection] 05.09.2000

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
